

## Torrance School Bonds Taken By Bank Syndicate

A Bank of America N.T. & S.A. underwriting syndicate has purchased the \$1,000,000 bond issue of the Torrance Unified School District. The Bank of America group paid a premium of \$13,609 for straight 3 1/2 per cent bonds, or a net interest cost to the district of 3.37 per cent. The bonds were referred to investors to yield from 1.70 per cent to 3.60 per cent, according to maturity May 1, 1962-1981.

The bonds are the sixth offering from an authorization approved by voters in 1958. Proceeds will be used for various school purposes.

BANK OF America and its associates finance a large part of the new schools and classrooms constructed each year to meet California's educational needs. In the past 12 months the bank and its underwriting syndicates bought more than \$680 million of California state and municipal bonds of all types.

Members of the bank group which purchased the \$1,000,000 Torrance Unified bonds were: Weeden & Co.; Paine, Webber, Jackson & Curtis; E. F. Hutton & Co., Inc.; Stone & Youngberg; Cruttenden, Podesta & Co.; J. A. Hogle & Co.; Wagnerseller & Durst, Inc.; Hannaford & Talbot; C. N. Whiae & Co.

## Ryan to Form Giant Radar Reflectors

Giant radar reflectors—the largest structures of their kind ever produced by Ryan Aeronautical Co. — will be explosively formed in the Ryan Aerospace Division's explosive forming facility in San Diego, it was announced this week.

Several of the aluminum mirrors, 78 inches in diameter and 22 inches deep, will be produced for Sylvania Electric Products, Inc., of Waltham, Mass. The reflectors will be used in an improved type of military radar installation.

A 35-ton ductile iron die, the heaviest ever made for use in Ryan's explosive forming process, is nearing completion in a Los Angeles shop to Ryan design and specifications. The great weight of the die will enable Ryan to maintain contour and dimensions in the mirror's parabolic shape within tolerances of one or two thousandths of an inch.

Largest of the three pits at the Ryan explosive forming facility on Kearny Mesa, San Diego, will be used for shaping the radar reflectors. The pit is 25 feet in diameter.

Ryan has established leadership in this important new technique, having already formed hundreds of differently-shaped, intricate parts from a variety of tough alloys, during a pioneering period dating back approximately three years. The process is attracting interest of companies throughout the nation for solution of difficult fabrication problems.

## Hearing Aids

Amazingly Low Priced
